Siometrix Brief

Imagine the number of cyberattacks you can prevent if you restrict your customers' access to authorised devices.

WHY ?

It would avoid account hacks unless attackers also steal the authorised device and passwords. It prevents many more attack vectors than other methods.

HOW ?

Siometrix uniquely identifies devices based on the hardware remnants of the manufacturing process - all done in software

SO WHAT ?

Siometrix has ease of integration similar to authenticator apps with much more robust security posturing.

RESULT ?

(A) Strengthens identity 6X. Vastly reduces organisations' (i) # of alerts, (ii) SOC team efforts, & (iii) security budgets.

(B) Doesn't deteriorate user experience despite higher security.

(C) User account hacking via social engineering/phishing is reduced.

(D) Reduces transaction fraud from 3rd-party (supply-chain) SW hacks.

(E) Ransomware & unapproved data access reduced.

(F) Reduces SIM swap fraud & improves eCommerce security.

Pierre Noël, with >35 years Info Sec experience in CISO, CSO like roles in organisations like Microsoft & Huawei. Currently advising Airbus.

SAYS ABOUT SIOMETRIX

"Cybersecurity works best when it is invisible while fortifying assets and networks. Siometrix lives up to this statement and holds transaction integrity despite a cyberattack."

Professor Emerita Marianne Winslett, University of Illinois, Urbana-Champaign PhD in Computer Science, Stanford University, with >30 years of cybersecurity experience.

SAYS ABOUT SIOMETRIX

"Siometrix checks device 'biometrics', a great idea when you don't want unauthorized devices accessing your systems. Siometrix goes beyond checking MAC addresses, which are easy to spoof".
